The Commercial Series solar lamps by Gama Sonic provide the perfect maintenance free and cost effective option for pedestrian lighting in cities, towns, communities and parks.

One of the biggest challenges communities face today is keeping costs down. Our solar powered technology harnesses energy from the sun, reducing your costs while providing the security lighting needed in your community.

Gama Sonic's Commercial Series solar lamps are installed all over the country, from parks, main streets and communities to HOAs, municipalities and residences.

Gama Sonic continues to be the leading manufacturer of commercial and residential outdoor solar powered pedestrian lighting. With more than 20 utility and design patents over the past 18 years, our innovations in design and technology continue to allow us to set the bar (brightness and duration) in the solar lighting market.

Gama Sonic solar lights are commercial grade and bring an alternative to traditional pedestrian lighting that can be easily installed without electrical wiring, digging, trenching or running gas in your park or community, saving you both time and money.

Commercial property owners who have switched to the Imperial II like myself have found these lights are more cost effective, easy to install and create a great atmosphere.

- Dennis Wagoner (owner of 9 Mobile Home Parks)

We live in Union County NC, an area that sustained significant damage during Hurricane Florence and Michael with massive flooding and winds. During the third night of the Florence hurricane, the power went out and our rural area was pitch black except for our Gama Sonic Imperial II Solar Lights which unlike other lights on our property held up in the adverse conditions. The views of the lights down our long driveway served as a beacon of hope throughout the storm, and we will be forever grateful.

- Mike and Cindy Kopp (Champagne Manor in Moroe, NC)
