## Gama Sonic's Uplight Planter Base

Gama Sonic's Uplight Planter Base provides a unique way to display your plants at night. The three solar panels absorb energy from the sun throughout the day and the plant is lit from below by twelve LEDs when the sets.

## Solar Lamp Location

For optimum light duration throughout the night, it is very important to place your solar lamp in a spot where it will receive the maximum amount of direct sunlight throughout the day. Please note that large planters or plants that cover the solar panels may affect the amount of night time light your product is able to produce.

## What's in the Box

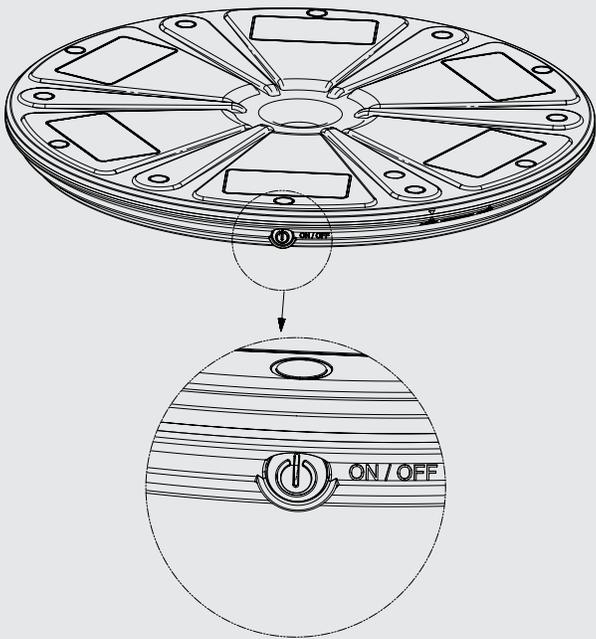

For best results, the solar light must be charged in the "ON" position for at least 2 days of full direct sunlight.

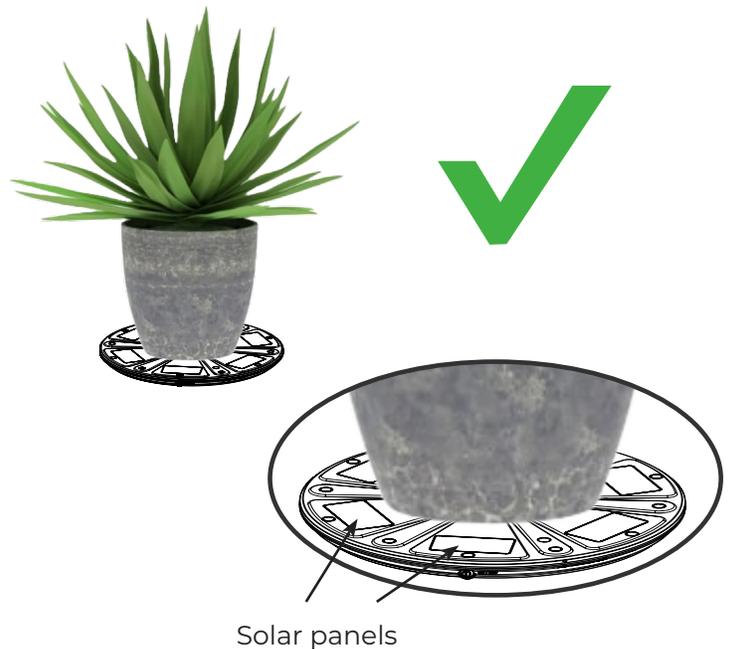

## Operation Instructions

1. On the side of the lamp, press the ON/OFF button to turn the lamp ON.
2. Place the lamp in its desired location ensuring it is open to direct sunlight.
3. Place your pot/planter on the light and ensure the solar panels are not obstructed from direct sun exposure.

Your lamp will turn on automatically at dusk.

**IMPORTANT: Ensure solar panels are not covered for optimal performance. Obstruction of panels may reduce charging efficiency and light output.**

## Replacement Parts

Replacement batteries are available at [www.gamasonic.com](http://www.gamasonic.com) or via our Toll Free number: +1-800-835-4113.

Your lamp uses two of the following batteries:

SB37V20

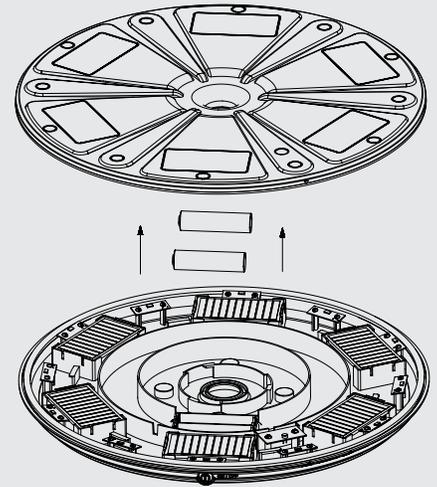

## Replacing the Batteries

**GAMA SONIC®**  
SOLAR LIGHTING

After several years of use, the battery may need replacing.

1. Remove the pot/planter, turn the lamp upside down and press the switch to turn the lamp OFF.
2. Remove the 15 screws from the bottom of the lamp.
3. Separate the two sections so you have access to the batteries.
4. Remove the old batteries and install the new ones. Make sure the negative (-) end of the battery is against the spring. The new battery should be a rechargeable Li-Ion 3.7V 1500mAh (or higher mAh) Item# SB37V20
5. Re-assemble the lamp by reversing steps 1-3.

NOTE: The top of the lamp will only fit one way, rotate it until the top piece sits flush with the bottom piece.

Batteries are available for purchase at  
[www.gamasonic.com](http://www.gamasonic.com)

## Maintenance

Clean the solar panels regularly with a damp towel to guarantee optimum performance. Do not use any type of solvent for cleaning and be careful not to put too much pressure on the solar panels while cleaning.

## Troubleshooting

If your solar light does not come on as expected despite observance of all the instructions, please try the following steps:

1. Make sure that the solar lamp is not being affected by any other light source.
2. Ensure the solar lamp is not positioned in the shade during the day.
3. Check that the batteries are installed correctly.

**NOTE:** The performance of the solar lamp will vary with the time of year. It will last longer when it has had a full day in the sun rather than a day in overcast weather.

**WINTERTIME TIPS:** For optimal performance, be sure to remove any snow or debris accumulation from solar panel(s). A solar panel free of debris will charge the batteries much more efficiently.

**WARNING:** Please keep out of reach of children. Do not dispose of the Li-Ion battery in the regular trash, municipal waste stream or by fire as batteries may leak or explode. Do not open, short circuit, or mutilate batteries as injury may occur. Preserve our environment by recycling Li-Ion batteries or disposing of them in accordance with local, State and federal regulations. Do not mix old and new batteries.
